

## ET Controller Rebate

Newhall County Water District (NCWD) is currently offering an ET Controller Rebate Program. The Program is available to single-family homeowners with a minimum of 1,200 square feet of irrigated landscape and a working in-ground irrigation system operated by a working timer/controller. The rebate, if eligible, is \$40.00 per active valve. The maximum amount for each rebate is \$480.00 per residence, not to exceed the cost of the ET Controller. Newhall County Water District will pay up to \$120.00 for standard installation.

**ET Controller** - The ET (EvapoTranspiration) Controller system detects water that is lost from soil through evaporation and transpiration from plants as part of their metabolic processes. Using continuous data from sensors and local weather stations, it automatically decreases or increases the irrigation schedule according to changes in weather, thereby reducing under or over-watering.

To be eligible you must meet the following requirements:

- Be a current single-family residential homeowner served by NCWD
- Have a minimum of 1,200 square feet of irrigated landscape
- Have a working in-ground irrigation system that is run by a working timer/controller

Rebate offer is only valid for single family homes served by Newhall County Water District, all rights reserved. Rebate is subject to verification of active valves and landscape served. Rebates are available on a first-come, first-served basis until funds set aside for this program are depleted.
